VisNetic SafeFile

VisNetic SafeFile is file encryption software for the desktop. This file encryption program creates an encrypted virtual drive on your computer that can only be loaded using a specified password. Once loaded, any kind of file can be dragged and dropped into it, rendering the file virtually untouchable by anyone but you.

This file encryption program is designed for deployment across large organizations and features fully centralized administration capability, including key recovery.

feature list

Encryption
VisNetic SafeFile employs the Blowfish encryption algorithm operating at bit strength of 448 bits. It is statistically impregnable against brute force attacks.

Real time file and folder protection
VisNetic SafeFile's "on-the-fly" disk encryption technology ensures that your data is safe at all times. Simply drag and drop to encrypt. File encryption is instant.

No format limitations
VisNetic SafeFile encrypts every kind of file format, whether it is textual, tabular, graphical, database, audio or video.

Virtual Drive
When you start VisNetic SafeFile, a virtual drive will appear in your "My Computer" folder within Windows Explorer. You may also view it through the MS-DOS prompt. Once the virtual drive is loaded, standard Windows functions such as cut, copy, paste, new file/folder creation, etc. can be used within the encrypted drive.

Disk Space
VisNetic SafeFile's symmetric encryption system allows you to encrypt an infinite amount of data, from 1 Megabyte to 2 Gigabytes of data in dedicated areas on your hard disk(s).

Store and Port Data
VisNetic SafeFile can create volume files on removable media. This allows for the flexibility to store and port data on zip disks, tape drives, etc.
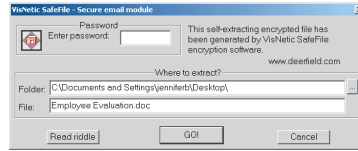

Backup
Encrypted backups are a standard feature using standard backup software or hardware, ensuring data safety and integrity.

visnetic

(viz-net-ik) (2002) vision of the internet

The VisNetic product family offers a total solution, built upon a common theme of interoperability, for business customers seeking to gain competitive advantages. VisNetic products will initially provide the building blocks necessary to serve an Internet-connected organization's messaging, security, and file transfer needs. VisNetic products encompass the latest technology: delivering stability, ensuring security, and providing scalability. In addition to a new range of offerings, customers will continue to enjoy the same reliable services from one trusted source.

system requirements

Minimum system requirements:

X486 CPU

8 Mb RAM

Running Windows 95 / 98

Internet Explorer 4.01 (or higher)

Recommended system requirements:

X586 CPU or better

32 MB RAM

Running Windows 95/98/NT4/ME/2000/XP

about us

Deerfield.com is committed to identifying cutting edge Internet applications that are intuitive, innovative, and economical, and bringing those applications to market. Each solution offered by Deerfield.com answers the query to leverage Internet connectivity.

In addition to the atypical business strategies of Deerfield.com, and in contrast to the hype-filled dotcoms of late, Deerfield.com differentiates itself through an exclusive portfolio. Within the offerings of the company, customers will discover an arsenal of solutions-based products.
